Types of loops:

- New Section 1 Page 1

optional [By default condition is true, if condition is absent it will create infinite loop.]

```

for (any valid Java statements; condition; any valid Java statements)
{
    // Code to repeat
    > 3
    (n-1)th statement
}
    > out of the loop
  
```

multiple statements are separated by commas.

```

for ( ; b <= a; a -= b, q++ );
    OR
  
```

```

while (b <= a) {
    a -= b;
    q++;
}
  
```

OR

```

do {
    a -= b;
    q++;
} while (b <= a);
  
```

Nested loops or inner loop : When a loop is present inside a loop called nested or inner loop.

We can have any levels of nesting, as per our requirement. Write a program to input number of rows and print the following pattern:

Input: Enter number of rows: 7

Output:

```

1 2 3 4 5 6 7
  2 3 4 5 6 7
    3 4 5 6 7
      4 5 6 7
        5 6 7
          6 7
            7
  
```
